*** Data Source: 2016-17 Maine School Age Immunization Assessment Survey																	
*																	
Regarding the Kindergarten Cohort:																	_
 Overall, 19 more schools reported for the 2016/17 year than 2015/16. 																	
 The number of private schools reporting doubled from 23 to 26 																	
 Total exemption rate increased from 4.5% to 5.0%. 																	
 All vaccine rates increased with the exception of MMR, which dropped 0.2% 																	
The exemption rate increase and MMR decrease are likely the result of the additional																	
private schools, which have a higher exemption rate than public schools.																	
For all cohorts:																	
 The Varicella rate increased for all grades. This immunization rate now includes 																	
children that have had at least one dose of varicella and children that have a history of																	
disease. Both are considered up-to-date based on CDC guidelines.																	
A second Varicella dose is not a requirement for Maine schools and some schools have																	
no ability to track/report this for survey purposes. It was removed from the 2016/17																	
survey results.
