B. Non-Assignable Areas ..... 15-16

## I. INTRODUCTION

The Space Allocation Guidelines together with the Educational Specifications and the Public School Standards and Guidelines for New School Construction and Major Renovation Projects constitute planning documents for the design of new school facilities that meet the goals and objectives of education in the 21st Century. In applying these Space Allocation Guidelines keep in mind that they are only that - guidelines. There will be exceptions because of the unique difference between school systems that will need to be considered by state and local officials.

It is the State's desire to find a solution to these situations in a cooperative and collegial manner. The State believes that this document will be very helpful to school boards, building committees, school officials, and designers in the process of planning a school that will be supported by the Department of Education and the State Board of Education. The Department of Education looks forward to working with individual school systems in applying these guidelines.

## II. DOCUMENTATION OF EXISTING EDUCATIONAL PROGRAMS AND INSTRUCTIONAL SPACE

The State of Maine requires that new and renovated schools be built efficiently to maximize the use of state construction dollars. Therefore, it is important for the Department of Education to understand your existing situation and your vision to better help you develop a solution that meets your school system's educational needs and that is fiscally responsible.

Please respond to each of the bullets below by providing information in a format that will give clarity to the existing situation. Include the school administration in preparing the responses.

- Class Size - Attach or explain your school board's policy on class size.

## For Middle and High Schools only, provide the following information:

- Classroom Scheduling - Provide an existing weekly classroom schedule for every room in the building and any temporary (portable) classrooms. Include the room number, size, teacher(s), number of students, and subject taught for each period.
- Vacant Rooms - Provide a list of vacant rooms for each period of the day and each day of the week using your present schedule.
- Departmental vs. Interdisciplinary Subject Organization - Explain your program organization and the philosophy that supports it.
- Collegiate Model (multiple teachers share same classroom) vs. Single Teacher Classroom Model - Explain your existing model and why you use it.
- Athletic Programs - Provide a list of sports teams by season and the number of participants for each sport. List the number of fields available and their locations.

## III. STATE SQUARE FOOTAGE STANDARDS

The Maine Department of Education supports the following standards in the planning of public school Projects: Elementary School 140 square feet per student, Middle School 160 square feet per student, High School 185 square feet per student and CTE Regions/Centers 250 square feet per student. These Standards will only vary in projects with very small or large enrollments, or those projects that include renovation components.

## IV. SPACE ALLOCATION GUIDELINES

The following table establishes space guidelines for the various types of spaces typically found in an Elementary, Middle, or High School facility. Guidelines are also included for Career and Technical Education (CTE) programs for those projects that include that component. In general, the areas given will be funded by the state when supported by a district's specific program requirements. School districts may add programs or increase the areas of different program spaces but any added programs or increased area over what the state will fund will be at local expense. The square foot cost of locally funded spaces shall be the same square foot cost as for state funded spaces.

| PreK Thru 12 |  |
| :---: | :---: |
| Space/Enrollment | Area (Square Feet) |
| Classrooms |  |

| 2000 |  |  | 6100 | 2150 |

**Non-Student usable space includes work area and storage and should be added to the Student Usable space to determine the total recommended space. Approved by the State Board of Education on April 11, 1992.

## V. SPACE ALLOCATION WORKSHEETS

## A. Explanation

The Department of Education has established four worksheets addressing space allocations for elementary, middle, high school, and CTE projects. Select the grade level worksheet(s) that pertain to your project and complete them prior to the beginning of program conferencing. The headings are self-explanatory. Categories will need to be expanded to meet individual program needs. The educational program will dictate the number of rooms to be entered.

These worksheets will allow planners to understand the present deficiencies of the existing facility and the need for space in the proposed facility. Only spaces for approved programs will be considered. The State will not support spaces for future programs that cannot be funded at the time the facility opens.

Space allocation worksheets can be found at http://www.maine.gov/doe/facilities/

## B. Non-Assignable Areas

In order to bring consistency across a broad range of school projects, the state utilizes a gross mark-up factor of up to 1.4 to calculate a school building's total square footage. (Total square footage equals the total net area of the program space plus the gross mark-up factor.) This mark-up allows for accounting of all non-assignable areas. Non-assignable area is the sum of all areas on all floors of a building not assigned to a specific use, but necessary for the general operation and function of the building.

Non-assignable spaces include:

- Building Service Area
- Custodial rooms
- Toilet rooms
- Other custodial facilities specifically for building maintenance
- Circulation Area
- Corridors and hallways
- Stairwells and landings
- Lobbies and vestibules
- Mechanical Area
- Mechanical rooms
- Boiler rooms and fuel storage vaults
- Electrical/Telephone/Data rooms
- Elevator and elevator machine rooms
- Mechanical/plumbing chases
- Other Area
- Exterior and interior wall thicknesses

Plans developed prior to Concept Approval are to be drawn to scale. This will permit the Department of Education to verify whether building circulation and common space fall within the maximum 1.4 mark-up. Gathering spaces will not be considered as a part of the 1.4 mark-up but will be considered as educational space when computing square footage for educational delivery and will be at local expense. Project rooms and similarly named spaces may also be at local expense.
