

macOS NWEA State Solutions Secure Browser Bulletin March 2024

UPDATE! NWEA State Solutions Secure Browser for macOS Version 4.3.1

An updated version of the NWEA State Solutions Secure Browser for macOS is available at <https://securebrowser.state.nwea.org/>.

- An update to 4.3.1 is highly recommended if the currently installed version 4.3.0 is shutting down or freezing and it is not due to network conditions. The existing application must be uninstalled before installing the new version. This will require uninstalling 4.3.0 and installing 4.3.1.
- If version 4.3.0 is performing as expected, no action is required.

This update requires additional steps to install. After following the steps in your state's System and Technology Guide, follow [additional macOS secure browser \(March 2024\) installation steps](#) to complete the installation.

No action is required for devices using iPadOS, Windows or Chromebook operating system. These versions of the Secure Browser can be used for testing:

- MacOS: 4.3.0 or 4.3.1
- Windows: 4.3.0
- Chromebook: 3.6.0
- iPadOS: 3.3.0

It is recommended to turn off automatic updates for operating systems during testing windows. Secure Browsers can be accessed via <https://securebrowser.state.nwea.org/>.
